The 5 AM Club
When conducting research in developing countries, an ability to negotiate a bewildering array of cultural and logistical obstacles is essential. Overseas Research: A Practical Guide distills essential lessons from scores of students and scholars who have collected data and done fieldwork abroad,
including how to prepare for the field, how and where to find funding for one’s fieldwork, issues of personal safety and security, and myriad logistical and relational issues. By encouraging researchers to think through the challenges of research before they begin it, Overseas Research will help prepare fieldworkers for the practical, logistical, and psychological considerations of very demanding work, help save valuable time, make the most of scarce financial resources, and enhance the quality of the field research. This third edition contains new material on social media, including representation of research subjects/collaborators, students’ digital branding and image, and representing universities abroad when posting publicly. It also covers emerging technologies such as solar panels for power in remote locations, new ways of digitally sending and receiving money, and incorporates more perspectives of women, LGBTQ+ people, and people of color researching abroad. The book will be of interest to overseas fieldworkers, and also to undergraduates in subjects such as anthropology, economics, geography, history, international studies, politics, sociology, and development studies.

The Future of Making

Kansas Wage Survey Road traffic collisions kill about 1.2 million people around the world every year but they are largely neglected as a health and
development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measures and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.

Critical Mass Raising the average human lifespan by a decade or more will change our world. The future is not about whether this will happen; it is about what we should do when it happens. Even the most pessimistic assertions about the future of our environment are underestimating the extent of the problem. There is simply no model in which more years of life does not equate to more people and in which that does not lead to more crowding, environmental degradation, more consumption, and more waste. Hence, as we prolong life,
these environmental crises will be further exacerbated. With current diets and production practices, feeding 7.6 billion people is degrading terrestrial and aquatic ecosystems, depleting water resources, and driving climate changes. The challenges of today are not just population, and it's not just consumption, it is waste also. Thanks to things such as cars, planes, big homes, deforestation and so forth, the annual carbon dioxide emissions of an average are three times as high as it should be. It is likely that this signals that the current level of dividends is unsustainable, hence, we use and return little of value to our natural world. In our book, we address the questions related to environmental health challenges that include contamination of air, water, and soil, and car transportation. In order to better understand natural, industrial, and social-environmental hazards, we have to think of them in a broader context (i.e., physical, chemical, biological, and cultural). We hope that the presented publication gives the reader a broader perspective on the issues related to environmental health challenges in contemporary society in the coming years.
