Experts' Guide to International Protocols In U.S. Military Operations: Law, Policy, and Practice, a distinguished group of military experts comprehensively analyze how the law is applied during military operations on and off the battlefield. Subject matter experts offer a unique insider's perspective on how the law is actually implemented in a wide swath of military activities, such as how the law of war applies in the context of multi-state coalition forces, and whether non-governmental organizations involved in quasi-military operations are subject to the same law. The book goes on to consider whether U.S. Constitutional 4th Amendment protections apply to the military's cyber-defense measures, how the law guides targeting decisions, and whether United Nations mandates constitute binding rules of international humanitarian law. Other areas of focus include how the United States interacts with the International Committee of the Red Cross regarding its international legal obligations, and how courts should approach civil claims based on war-related torts. This book also answers questions regarding how the law of armed conflict applies to such extra-conflict acts as
The Patentee's Manual The arrival of the "International Law: Achievements and Prospects" can fairly be described as a major event in international legal publishing. It has been written by international lawyers from the North, the South, the East and the West, whose differing origins and different, or even opposed, academic backgrounds have ensured that the book encapsulates and brings into focus the main forms of civilization and the principal legal systems of the world. The book's most distinctive feature is its international, multi-cultural and polyphonic nature. "International Law: Achievements and Prospects" aims to inform and to educate, to make the discipline of international law accessible to a very broad public, and to promote a meeting of minds on fundamental notions, key concepts, and the guiding principles of international law, over and beyond frontiers, ideologies and doctrines. In addition, it is intended to provide a framework for thought, to describe what international law is today, to specify its nature, define its purpose and show its strengths, and also to point out its weaknesses. All the contributing authors are or have been practitioners of international law. Their contributions express a global view of international law which helps to unravel the complex reality of the contemporary world. "International Law: Achievements and Prospects" has been produced under the auspices of UNESCO; its content also aspires to reflect, in some measure, the imprint of that Organization's sponsorship.

The Global Community Yearbook is a one-stop resource for all researchers studying international law generally or international criminal tribunals specifically. The Global Community Yearbook appears annually in two-volume editions of carefully chosen primary source material and corresponding expert commentary. The general editor, Professor Giuliana Ziccardi Capaldo, employs her vast expertise in international law to select excerpts from important court opinions and also to choose experts from around the world who contribute essay-guides to illuminate those cases. Although the main focus is recent case law from the major international tribunals and regional courts, the first volume of each year's edition always features expert articles by renowned scholars who address broader themes in international law, themes that appear throughout the case law of the many courts covered by the series as a whole.

This particular edition (2010): Beginning with the 2010 edition, the Yearbook will include the new section, Forum-Jurisprudential Cross-Fertilization: An Annual Overview. This section aims to compare and analyze the interconnections between the decisions of international courts and tribunals, as a way of exploring and examining judicial dialogue and the development of common legal principles and concepts in all branches of international law. The Yearbook is the first academic journal to present an annual overview of the process of jurisprudential cross-fertilization between the courts, based on the drafting and systematic classification of legal maxims (i.e. points of law decided by various international courts) in the section entitled "Decisions of International Courts and Tribunals." A comprehensive and complete survey by eminent international law scholars exploring, evaluating and documenting this process has the potential to enhance our contribution and thus further guide our understanding of how to reduce conflicts and create an effective exchange of

The aim is to promote a favorable environment for the courts to advance the process of judicial cooperation with a view to the possible harmonization of legal principles governing the global community. c. Individual volumes: Volume 1: The 2010 edition of the Global Community Yearbook presents three categories of material wholly beneficial to any international law-researcher: International tribunals' court opinions, excerpted with scholarly skill by General Editor Giuliana Ziccardi Capaldo; expert guidance on those cases in the form of commentary by globally recognized luminaries whom Ziccardi has chosen personally; and more broadly focused introductory essays by similarly prominent scholars whom Ziccardi has also selected for that purpose. In the introductory essays, those scholars take on current topics such as global intellectual property law and policy, the nature of international law and human development, and the legal-political connotation of material support to terrorism. These incisive and knowledgeable introductory articles help frame the debates currently raging in international law before this edition leads the reader on to expert commentary on the noteworthy cases from this past year's dockets of the following tribunals: - The International Court of Justice - The International Tribunal for the Law of the Sea - WTO Dispute Settlement System - International Criminal Court - International Criminal Tribunal for the Former Yugoslavia - International Criminal Tribunal for Rwanda - Court of Justice of the European Union Ziccardi has arranged the sections of this volume according to that list of tribunals, and she has included a short, targeted index for each of those sections, making any research in this volume efficient and fruitful. The 2010 edition of the Global Community Yearbook also gives researchers an illuminating tour through the varied and dynamic law of regional and organizational courts. For many years such computer networks have played an indirect role in our daily lives as the hidden servants of banks, airlines, and stores. Now they are becoming more visible as they enter our offices and homes and directly become part of our work, entertainment, and daily living. The study of how computer networks function is a combined study of communication theory and computer science, two disciplines appearing to have very little in common. The modern communication scientist wishing to work in this area soon finds that solving the traditional problems of transmission, modulation, noise immunity, and error bounds in getting the signal from one point to another is just the beginning of the challenge. The communication must be in the right form to be routed properly, to be handled without congestion, and to be understood at various points in the network. As for the computer scientist, he finds that his discipline has also changed. The fraction of computers that belong to networks is increasing all the time. And for a typical single computer, the fraction of its execution load, storage occupancy, and system management problems that are involved with being part of a network is also growing.

The Oxford Handbook of International Climate Change Law

Climate change presents one of the greatest challenges of our time, and has become one of the defining issues of the twenty-first century. The radical changes which both developed and developing countries will need to make, in economic and in legal terms, to respond to climate change are unprecedented. International law, including treaty regimes, institutions, and customary international law, needs to address the myriad challenges and consequences of climate change, including variations in the weather patterns, sea level rise, and the resulting migration of peoples. The Oxford Handbook of International Climate Change Law provides an unprecedented and authoritative overview of all aspects of international climate change law as it currently stands, with guidance for how it should develop in the future. Over forty leading scholars and practitioners set out a comprehensive understanding of the legal issues that surround this vitally important but still emerging area of international law. This book addresses the major legal dimensions of the problems caused by climate change: not only in the content and nature of the international legal frameworks, which need implementation at the national level, but also the development of carbon trading systems as a means of reducing the costs of meeting emission reduction targets. After an introduction to the field, the Handbook assesses the relevant institutions, the key applicable principles of international law, the international mitigation regime and its consequences, and climate change litigation, before providing perspectives focused upon specific countries or regions. The Handbook will be an invaluable resource for scholars, students, and practitioners of international climate change law. It provides readers with diverse perspectives, bringing together interpretations from different disciplines, countries, and cultures.

Guide to the International Registration of Marks under the Madrid Agreement and the Madrid Protocol (2008) In the Mediterranean and the Black Sea, the assessment of demersal stocks mainly relies on scientific surveys (bottom and beam trawl) while the assessment of pelagic stocks is essentially based on acoustic surveys using acoustic techniques with mid-water trawling. These routine surveys-at-sea provide essential information, which in turn are crucial to fine-tune the assessments of the status of resources and to estimate more precisely indicators at the population and fish community levels. However, survey practices differ from one subregion to another, each approach having its own strengths and limitations. In addition, there is still a lack of large-scale standardized surveys aimed at analysing the diversity and distribution of the main demersal and pelagic species across the Mediterranean and the Black Sea. One way of tackling this issue is to carry out international scientific surveys covering the main demersal and pelagic stocks based on a common methodology. The methodology presented in this publication aims at supporting the planning and implementation of regional demersal (bottom and beam) trawl and pelagic acoustic surveys. It can be useful for the implementation of new surveys-at-sea in areas where demersal trawl and pelagic acoustic surveys are not regularly carried out. It can also contribute to increasing comparability between existing surveys thanks to the standardization of methods, sampling of catches and data.

UN Peacekeeping Operations and the Protection of Civilians This collection of essays by Professor Michael N. Schmitt of Durham University draws together those of his articles published over the past two decades that have explored particular fault lines in the law of armed conflict. As such, they examine the complex interplay between warfare and law, seeking to identify where the law and warfare appear to diverge, and where such apparent divergence can be accommodated through contextual interpretation of the law. Each essay examines a particular issue in either the jus ad bellum (the law governing resort to force) or jus in bello (international humanitarian law) that has proven contentious in terms of applying extant norms to the evolving face of armed conflict. Among the topics addressed are counter-terrorism, cyber operations, asymmetrical warfare, assassination, environmental warfare and the participation of civilians in hostilities.
