Inspecting Surgical Instruments The analysis and sorting of large numbers of cells with a fluorescence-activated cell sorter (FACS) was first achieved some 30 years ago. Since then, this technology has been rapidly developed and is used today in many laboratories. A Springer Lab Manual Review of the First Edition: "This is a most useful volume which will be a welcome addition for personal use and also for laboratories in a wide range of disciplines. Highly recommended." CYTOBIOSS

Natural Language Annotation for Machine Learning A new edition of one of Zola's lesser-known novels from the Rougon-Macquart Cycle Finding the young Angélique on their doorstep one Christmas Eve, the pious Hubert couple decide to bring her up as their own. As the girl grows up in the vicinity of the town's towering cathedral and learns her parents' trade of embroidery, she becomes increasingly fascinated by the lives of the saints, a passion fueled by her reading of the Golden Legend and other mystical Christian writings. One day love, in the shape of Félicien Hautecoeur, enters the dream world she has constructed around herself, bringing about upheaval and distress. Although it provides a detailed portrait of provincial 19th-century life and it adheres to a naturalist approach, The Dream eschews many of the characteristics of Zola's other novels of the Rougon-Macquart cycle—such as a pronounced polemical agenda or a gritty subject matter—offering instead a timeless, lyrical tale of love and innocence.

Drug Delivery Aspects Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.

The World of Surgical Instruments The AAMI recommended practice, Comprehensive guide to steam sterilization and sterility assurance in health care facilities, is a breakthrough standard in terms of its scope. AAMI has updated ST79 with the release of ST79:2010/A4:2013. Of particular importance, A4:2013 provides four new figures demonstrating the wrapping of items for steam sterilization and adds an annex focused on Moisture assessment. As of Oct. 25, 2013, purchasers of ST79 will receive ANSI/AAMI ST79:2010 and A1:2010 and A2:2011 and A3:2012 and A4:2014 as a single consolidated document. Among other changes from the 2006 edition of ST79, this revised and expanded second edition of ST79 includes guidance on the use and application of Class 6 emulating indicators, a chemical monitoring device fairly new to the United States. Because ST79 essentially consolidates five AAMI steam sterilization standards (whose content was reviewed and updated to reflect current good practice prior to being incorporated into ST79), it truly is a comprehensive guideline for all steam sterilization activities in healthcare facilities, regardless of the size of the sterilizer or the size of the facility, and provides a resource for all healthcare personnel who use steam for sterilization.

Scrubbing, Gowning and Gloving Surgical site infections are caused by bacteria that get in through incisions made during surgery. They threaten the lives of millions of patients each year and contribute to the spread of antibiotic resistance. In low- and middle-income countries, 11% of patients who undergo surgery are infected in the process. In Africa, up to 20% of women who have a caesarean section contract a wound infection, compromising their own health and their ability to care for their babies. But surgical site infections are not just a problem for poor countries. In the United States, they contribute to patients spending more than 400 000 extra days in hospital at a cost of an additional US $10 billion per year. No international evidence-based guidelines had previously been available before WHO launched its global guidelines
on the prevention of surgical site infection on 3 November 2016, and there are inconsistencies in the interpretation of evidence and recommendations in existing national guidelines. These new WHO guidelines are valid for any country and suitable to local adaptations, and take account of the strength of available scientific evidence, the cost and resource implications, and patient values and preferences.

Compounding Sterile Preparations The first edition of Sterile Processing, Invisible Culture was an instant hit among techs, as it peered behind the scenes into the hidden world of a healthcare career that has long been past due to receive its well-deserved recognition. Sterile processing techs the world over have been wondering why, even in the 21st century, with robotic and laparoscopic instruments taking center stage in the surgical theater, the average lay person STILL has no idea who is responsible for preparing all of the high-tech gadgetry used in surgery or
even how it is prepared. For decades the job of cleaning and sterilizing medical instruments has been so "invisible" as to almost seem like some type of covert operation. Well it is not! Sterile Processing is a legitimate career utilizing elite members of surgical teams from all around the world to make surgeries safe for every patient who goes under the knife. Sterile Processing, Invisible Culture "Reprocessed" exposes this ever-expanding career from the inside out, just as the original version did but without the photos and personal names that some readers found offensive and unwarranted.

Principles of Parenteral Solution Validation "Would You Have Surgery Where You Work?" I've asked this question numerous times in various facilities across the country. Each time only about 3% of the staff will raise their hands. The other 97% of the hands remain lowered. This is more telling (and more frightening) than the best surveyor's report! We are so much better than 3%. No one comes to a hospital to try and get worse. They come to get better. CSPD gets to help and be a part of that. This book is to help CSPD leaders with tools, tips, and a few stories to help along the way!
